Yalick Farms System Might Be At Increased Risk From Microbial Contamination

Aqua Pennsylvania has issued a boil water advisory for customers in the Yalick Farms water system, due to the loss of positive pressure in the distribution system as a result of a leak in a temporary storage tank. Aqua customers in this area are advised to use boiled or bottled water for drinking, making ice, brushing teeth, washing dishes and food preparation until further notice. You will be notified when this advisory is lifted.

What should I do?

- **DO NOT DRINK THE WATER WITHOUT BOILING IT FIRST.** Bring all water to a boil, let it boil for one minute, and let it cool before using, or use bottled water. Boiled or bottled water should be used for drinking, making ice, brushing teeth, washing dishes, and food preparation **until further notice**. Boiling kills bacteria and other organisms in the water.
- ***Inadequately treated water may contain disease-causing organisms. These organisms include bacteria, viruses, and parasites, which can cause symptoms such as nausea, cramps, diarrhea, and associated headaches.***
- The symptoms above are not caused only by organisms in drinking water, but also by other factors. If you experience any of these symptoms and they persist, you might want to seek medical advice. People at increased risk should seek advice about drinking water from their health care providers.

What happened? What is being done? When will the problem be corrected?

On Monday, December 21, 2020, Aqua Pennsylvania staff were alerted by an alarm that system pressure at Yalick Farms was dropping quickly. Emergency personnel responded and found a leak in the temporary storage tank. The problem was isolated, but not before a loss of positive pressure occurred in the distribution system. A loss of positive water pressure is a signal that conditions could enable contamination of the distribution system through backflow by back-pressure or back-siphonage. As a result, Aqua Pennsylvania has issued a boil water advisory for its customers in the Yalick Farms water system.

Until water sample test results are received from the laboratory, Aqua customers are advised to use boiled or bottled water for drinking, making ice, brushing teeth, washing dishes and food preparation until further notice, which would be no sooner than Wednesday, December 23, 2020.

General guidelines on ways to lessen the risk of infection by microbes are available from the EPA Safe Drinking Water Hotline at 800.426.4791.

Please share this information with all the other people who drink this water, especially those who may not have received this notice directly (for example, people in apartments, nursing homes, schools, and businesses). You can do this by posting this notice in a public place or distributing copies by hand or mail.
